(54) POWER GENERATING SYSTEM FOR FUEL CELL

(57)Abstract:

PROBLEM TO BE SOLVED: To provide a power generating system for a fuel cell, in which impurities such as minute dust and salt, etc., included in the air supplied to the air pole of a fuel cell can be removed simply and efficiently.

SOLUTION: In a reactive air supply apparatus 1 of the power generating system for the fuel cell S, a wet filter 2 which is kept wet by the water supply means is arranged between an air fan F and an air pole G. In the water supply means, a circulation bypass line, which is branched off from a cooling water flow path Q that sends the cooling water into a cooling part of fuel cell main body A, is formed, and the water taken in from the cooling water flow path Q is led to the wet filter 2 to moisturize it by spraying or the like. For the air taken in from the outside, the coarse-grain dust is removed when the air passes a pretreatment filter E, and the impurities of minute dust and salt, etc., are removed when passing the wet filter 2. A dirt water containing the impurities is cleaned in the water processing apparatus 10 and put back in the cooling water flow path Q.
